PRODUCT REQUIREMENTS DOCUMENT

buzzFest Marketplace Platform

Home-Baker Marketplace & E-Commerce Platform (operating as Apna Bakery)

Version	v1.4.1-BETA (as built)
Status	Beta Proof of Concept: As-Built Baseline
Deployment	https://buzz-fest.vercel.app/
VP of Product	Jonathan Vance
Lead Product Manager	Sarah Jenkins
Engineering Director	Elena Rostova
Lead Backend Engineer	Priya Shankar
QA Lead	Marcus Brody
Target Release	Q4 2026 / Production Readiness Review

Product at a Glance

buzzFest (operating as Apna Bakery) is a web marketplace that brings independent Bengaluru home bakers into one place where customers can discover, search and order. This document describes the beta proof of concept as built in October 2026.

The problem

- Home bakers sell through Instagram DMs, WhatsApp and personal networks.
- Customers compare prices, dietary options and photos across disjointed channels.
- Bakers log orders and collect payment by hand.

Who it is for

- Ritika, 29, working mother: speed, bulk orders and delivery updates.
- Ramvilas, 47, lecturer: budget-conscious, wants offers and discounts.
- Halima, 65, homemaker: low vision, new to mobile, needs healthier options.
- Also independent bakers and a marketplace operator.

What is built

- Home page with curated collections, and an Our Bakers directory.
- Product catalogue with keyword search and category filters.
- Product page: quantity, size, message on cake, special instructions, image zoom.
- Cart quick view and cart page with delivery fee and free-delivery prompt.
- Single-column mobile layout.

What is planned

- Guest checkout, pickup or delivery choice, payment gateway.
- Order confirmation, email and order status tracking.
- Stock reservation, real discount pricing, baker onboarding.
- Coupons, dietary filters, phone ordering, live delivery updates.
- Operations dashboard (not started).

4	28	₹70	53/100
partner bakers	products listed	delivery, free above ₹1,500	Lighthouse score (indicative)

Where the POC stops: the customer journey ends at the cart page. Proceed to Pay has no action. Checkout, payment and order confirmation are planned.

Targets for general availability: cart conversion above 18%, average order value ₹750+, checkout drop-off below 25%, fulfilment lead time under 24 hours.

Built with: Next.js, TypeScript, Tailwind CSS, Prisma, PostgreSQL (Neon), Vercel and Cloudinary.

Revision History

Version	Description
v1.0.0-BETA	Original approved baseline PRD: objectives, personas, functional requirements FR-01 to FR-05, architecture, NFRs, design system, beta limitations, rollout.
v1.2.0-BETA	Consolidated edition: merges the baseline PRD with the v1.2 working draft; adds KPI table, requirements summary, data model table, risk register, roadmap and glossary.
v1.2.1-BETA	Adds research foundation (goal statement, research approach, pain points, journey map insight), persona images and research-driven needs, expanded roadmap, and a references section with design and research links.
v1.3.0-BETA	As-built alignment with the live proof of concept and repository: requirement status, user journey, page inventory, user stories with acceptance criteria, business rules, catalogue overview, assumptions and open questions, screenshots of every page. Capabilities not built (checkout, payment, confirmation, notifications) are marked as planned.
v1.4.0-BETA	Adds a competitive landscape, a measured Lighthouse performance baseline, mobile screenshots with observations, and related limitations and roadmap items.
v1.4.1-BETA	Adds a one-page Product at a Glance summary after the cover.

1. Executive Summary & Business Objectives

buzzFest (operating commercially as Apna Bakery) is a digital marketplace platform that connects customers with independent home bakers across Bengaluru, focusing initially on Indiranagar, Koramangala, Jayanagar and Whitefield. It brings baker discovery, product browsing, search and filtering, and cart management into one web application, and lays the groundwork for checkout and fulfilment.

This PRD is the as-built baseline for the current beta proof of concept (POC) at https://buzz-fest.vercel.app/. The customer journey in the POC runs from the home page to the cart page. Checkout, payment and order confirmation are specified but not yet built, and each is marked as such throughout this document.

1.1 Strategic Business Goals

- **Catalog Discovery:** Showcase four initial artisan bakers: Sandhya Mishra, Priya Sharma, Meenakshi Iyer and Ananya Das.
- **Cart Experience:** Provide a cart with real-time price calculation, per-item messages and special instructions, a delivery fee and a free-delivery progress prompt.
- **Checkout Experience:** Add guest checkout, delivery and pickup options, and payment (planned).
- **Visual Consistency:** Maintain high brand fidelity through a chocolate-inspired design system built on Next.js and Tailwind CSS.
- **Enterprise Scalability:** Lay the architectural groundwork for inventory enforcement, payment gateway integration (Stripe/Razorpay) and an Operations Dashboard.

1.2 Core Strategic KPIs

Targets for general availability.

KPI	Target
Cart conversion rate	> 18%
Average Order Value (AOV)	₹750+
Checkout drop-off rate	< 25%
Order fulfilment lead time compliance	< 24 hours

1.3 Product Overview & Scope

Area	Status in POC	Detail
Baker discovery	Built	Home page collections and an Our Bakers directory.
Catalogue browsing	Built	Product listing with keyword search and category filters (baker and price-range filters are supported by the catalogue query), and a product detail page.
Item customisation	Built	Quantity, size, message on cake and special instructions.
Cart	Built	Quick-view drawer and a full cart page with price breakdown.

Area	Status in POC	Detail
Checkout & guest details	Not built	Planned (FR-03).
Payment	Not built	No payment gateway. The Proceed to Pay button is displayed but has no action.
Order confirmation & notifications	Not built	Planned.
Order tracking & operations	Not built	Order statuses exist in the data model only. The operations app has not been started.
Stock enforcement	Not built	Stock is displayed but not enforced; deferred to v1.1.
Baker onboarding (Join Us)	Placeholder	The Join Us navigation link opens the About Us page.

2. Problem Statement, Goals & Research Foundation

2.1 Problem Statement & Market Opportunity

Independent home bakers operate in a fragmented ecosystem, relying on Instagram DMs, WhatsApp chats and personal networks for discovery and transactions. This creates friction for both customers and bakers:

- **Customer Discovery Friction:** Customers must navigate multiple disjointed channels to compare prices, verify dietary tags (vegan, eggless, gluten-free) and inspect product photography.
- **Operational Overhead for Bakers:** Bakers handle manual order logging and ad-hoc payment collection, with no inventory synchronisation across channels.
- **Lack of Structured Workflows:** There is no unified guest checkout, standardised pricing in Indian Rupees (₹) or automated order lifecycle tracking.

buzzFest consolidates these channels into a single, high-performance web marketplace.

2.2 Goal Statement

The product concept began as an ordering app for the Apna Bakery store in Koramangala, which serves mostly affluent young customers, with about 30% of its customers being non-affluent. The design phase ran from November to December 2023.

> *Our Bakery App will let users purchase their desired/required product, which will affect users who don't have time, want to save money or may have disabilities, by allowing them to order fast, cheaper and in a user friendly (accessible) way.*

Effectiveness is measured by the increase in the number of orders received by the store.

2.3 Research Approach & Pain Points

User research was conducted with a group of 10 clients, from whom three were chosen as model personas (Section 3.2). The group covered a range of age groups, gender identities and socio-economic statuses. Four pain-point themes emerged:

Theme	Research Finding	PRD Response
Healthier Alternatives	Users look for healthier options, though they still like to eat sweets.	FR-01 dietary badges and category tags; Guilt Free Indulgence collection.
Offers & Prices	Low and middle income groups want coupons or offers to make exotic items accessible.	FR-02 cart quick view shows a struck-through original price and savings (illustrative; see Section 6.1). Coupons are on the roadmap (Section 13).
Updates on Delivery	Customers want better bulk-ordering options and updates on delivery.	FR-03 delivery window notice; FR-04 order status tracking (planned). Real-time delivery updates are on the roadmap.
Accessibility	Elderly users and those unfamiliar with technology find it difficult to order online.	WCAG 2.1 AA target and keyboard navigation (Section 8). Design-phase considerations: strong colour contrast, text resize and zoom, and medium-sized icons.

2.4 Journey Map Insight

The journey map for Ritika Krishnamurthy follows a busy evening: she needs to order for a party at home that night while preparing for a work presentation and collecting her children. She finds a bakery through Google and friends, then calls to place a bulk order. The phone process is slow, the options are hard to visualise from verbal explanations, and after ordering she has to call repeatedly for delivery status, even considering a backup order.

The improvement opportunities identified were a quick list of previous orders, fewer ordering steps, order details and the captured address confirmed back to the customer with a customer-care number, and real-time updates on the person delivering the order. These inform FR-02, FR-03 and FR-04.

2.5 Key Takeaway

Learnings from usability studies moved the project from a focus on appealing designs to a user-centred, accessible design approach.

2.6 Competitive Landscape

Buzzfest operates in a space where customers can discover bakeries and place orders through several existing channels, including social media, messaging apps, food-delivery marketplaces, and individual bakery websites. These alternatives already serve parts of the customer journey, but they differ in how they present products, manage enquiries, and support ordering.

- **Instagram and WhatsApp ordering:** Instagram supports visual product discovery and promotion, while WhatsApp Business provides product catalogues and direct customer communication. These channels can be convenient for small bakeries, although order details may need to be coordinated through conversations.
- **Food-delivery marketplaces:** Platforms such as food-delivery apps provide an established channel for customers to discover food businesses and place orders. However, their suitability for a particular bakery depends on factors such as location, listing eligibility, fees, and delivery requirements.

- **Individual bakery websites:** Dedicated websites give bakeries greater control over their branding, product presentation, and ordering experience. However, each bakery operates its own storefront, so customers may need to visit multiple websites to compare options.

Buzzfest's opportunity: Buzzfest can differentiate itself by bringing bakery discovery and product browsing into a more focused experience. Rather than relying entirely on social media feeds, individual business websites, or general-purpose marketplaces, it can help customers explore bakery offerings in one place. Its competitive advantage will depend on the breadth of bakery listings, the ease of discovering relevant products, and how smoothly customers can proceed from browsing to ordering.

Documentation note: *This is a qualitative comparison of alternative channels, not a verified market study. The positioning of Buzzfest is a product hypothesis; competitor testing and customer research would be needed to validate its advantages.*

3. Target Personas & User Journeys

3.1 Stakeholder Personas

Persona	Description & Role	Core Needs & Pain Points
Hungry Customer (Guest User)	Urban professionals and families seeking premium homemade cakes, gluten-free pastries and traditional breads.	Fast discovery, transparent pricing and stock counts, guest checkout without mandatory account creation, custom order instructions, instant email confirmation and reliable delivery estimates.
Independent Home Baker	Artisanal home bakers in Indiranagar, Koramangala, Jayanagar and Whitefield.	Robust catalog management, transparent INR pricing, digital visibility, fair product attribution and structured order visibility, replacing manual WhatsApp ordering.
Marketplace Operator (Admin)	Internal operations role responsible for order oversight.	Monitoring order statuses (Pending, Paid, Preparing, Out for Delivery, Completed, Cancelled), task assignment, fulfilment coordination and status monitoring via the future operations console.

3.2 Customer Persona Research

The customer persona is expanded through three research-based profiles. Each card below captures the person's goals, frustrations and context, and the table that follows maps their needs to requirements in this PRD.

I need it fast, I need it done perfectly!

Goals

- Ritika krishnamurthy is a smart working professional, who does her work efficiently and expects the same from any app she uses.

Frustrations

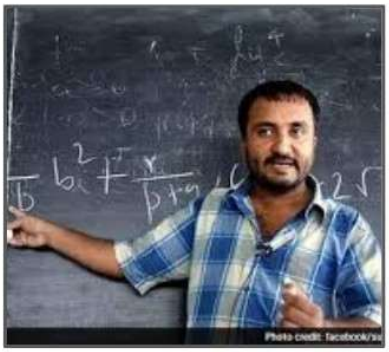

- Dislikes an app that works slow,or does not provide pepper updates on status of delivery.

Name

Age: 29
Education: Btech
Hometown: bangalore
Family: 2 kids, aged 4, 8
Occupation: Software Engineer.

Ritika is a working mom, doesn't have time to cook, so like to order items from the bakery frequently, she leads a fast paced life and needs a fast app which can meet her lifestyle. She often throws parties, so bulk orders and is a frequent user of the app.

Figure 1. Persona: Ritika Krishnamurthy, working professional and frequent bulk buyer

I need to save money for a better future

Goals

- Wants his family to experience the good things in life, but also save money while doing so

Frustrations

- Hates having to spend too much on bakery products.
- Feels cheated if the product is expensive or has no discounts.

Name

Age: 47
Education: Msc Biotechnology
Hometown: Patna, Bihar
Family: Wife and one son
Occupation: Lecturer

Ramvilas Shukla , moved to Bangalore to earn a better living for his family, though he can't afford expensive items, he does occasionally like to spend on a cake or a pastry. He is budget conscious, so like have the best options at the cheapest possible rates, also to know the best offers and coupons available.

Figure 2. Persona: Ramvilas Shukla, budget-conscious occasional buyer

Name

Age: 65
Education: 8th pass
Hometown: Lucknow
Family: 5 kids and husband
Occupation: homemaker

I have taken care of others all my life, don't like to depend on others

Goals

- Needs to feel comfortable, self reliant and independent to do any of **her** work.

Frustrations

- Needs healthier options, though she craves sweet foods
- Can't see and is non tech savvy.
- Often needs help to order online.

Halima Sadiya is not well educated and very recently started use of mobile, she cant see very well or operate the device, does not under english well either. Apart from this she has been instructed to eat healthier (sugar free) options since she has diabetics. She is from a well to do business family.

Figure 3. Persona: Halima Sadiya, low-vision, first-time mobile user seeking healthier options

3.3 Persona-to-Requirement Mapping

Persona	Key Needs (from persona card)	Requirements Addressed	Research-Driven Needs Not Yet in Beta
Ritika Krishnamurthy	Fast app, timely delivery status updates, frequent and bulk orders.	FR-02 cart with quantity control and per-item notes; FR-03 visible delivery fee and morning delivery window; FR-04 status tracking (planned); performance targets in Section 8.	Quick re-order suggestions from past orders; combo options and discounts for party and frequent orders; real-time updates on the delivery person.
Ramvilas Shukla	Best options at the lowest prices; visible discounts.	FR-02 cart quick view shows a struck-through original price and total savings (illustrative); FR-03 free-delivery progress message in the cart.	Coupons and offers; top offers listed first; easy discovery of cheaper options.
Halima Sadiya	Healthier, sugar-free options; low vision; limited tech confidence; needs help ordering online.	FR-01 vegan badges, category tags, search and filters; WCAG 2.1 AA target and keyboard navigation (Section 8).	Sugar-free filter; order-by-phone and call-the-bakery option; language options; a more intuitive, less text-based interface.

4. User Journey & Page Inventory

4.1 End-to-End User Journey (As Built)

The POC journey runs from the home page to the cart page. Steps 8 onward are planned.

Step	What the user does	Where	Status
1	Lands on the home page and sees the hero banner, Our Star Partners, In Demand and Guilt Free Indulgence collections.	Home	Built
2	Explores the partner bakers: specialty, location, rating, baker-since year and tagline.	Our Bakers	Built
3	Browses the catalogue, searches by keyword and applies category filters.	Products	Built
4	Opens a product and chooses quantity and size, adds a message on cake and special instructions.	Product Detail	Built
5	Adds the item to the cart and reviews it in the quick-view drawer.	Cart Quick View	Built
6	Reviews the full cart: edits notes, changes quantity, removes items, sees the delivery fee and free-delivery progress.	Cart	Built
7	Sees the Proceed to Pay button, which has no action in the POC. This is the end of the journey.	Cart	Built (end of POC)
8	Provides guest details, chooses delivery or pickup, and pays.	Checkout	Planned
9	Views the order confirmation and receives an email.	Confirmation	Planned

4.2 Page Inventory

Page	Route	Purpose	Requirement	Status
Home	/	Landing page with hero banner and curated collections: Our Star Partners, In Demand, Guilt Free Indulgence.	FR-01	Built
Our Bakers	/bakers	Directory of the four partner bakers.	FR-01	Built
Products	/products	Catalogue with search, category filters, item count and Clear Filters. Filters are carried in the URL.	FR-01	Built
Product Detail	/products/[slug]	Image, baker, rating, description, quantity, size, message, special instructions, price, stock note and Add to Cart. Clicking the image opens an enlarged view in a modal.	FR-01, FR-02	Built
Cart Quick View	Drawer on any page	Items, subtotal, delivery, taxes, savings, total and a Go to Cart button.	FR-02	Built
Cart	/cart	Full cart with notes, quantity control, price summary and delivery window notice.	FR-02, FR-03	Built (end of POC)
About Us	/about_us	Brand story, founder note and values.	None	Built (sample content)

Page	Route	Purpose	Requirement	Status
Join Us	Navigation link to /about_us	Intended baker onboarding.	Roadmap	Placeholder
Checkout & Confirmation	Not available	Guest details, fulfilment choice, payment and order confirmation.	FR-03	Planned

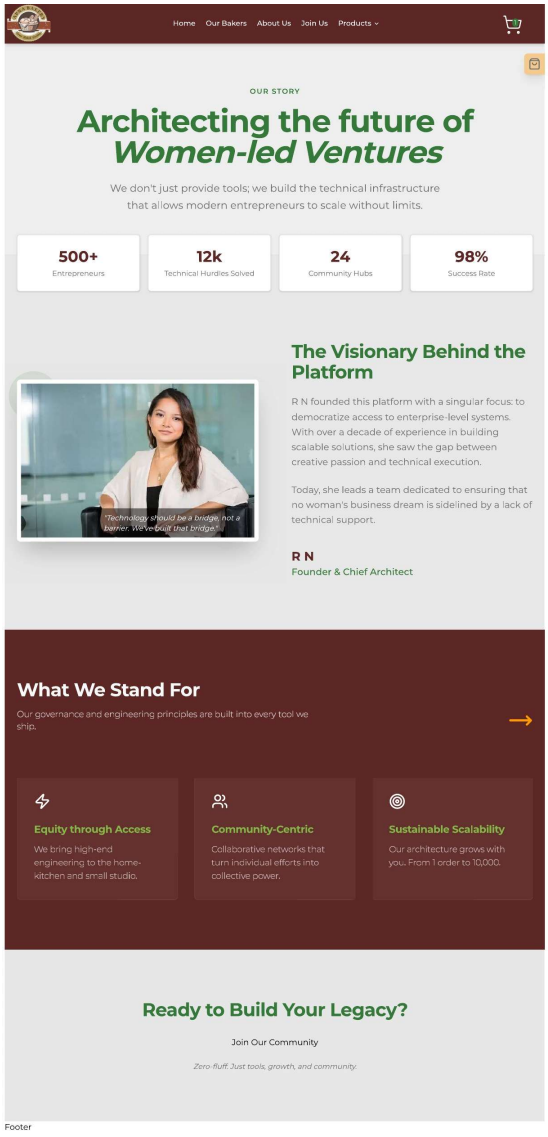

Figure 4. About Us page

On this page

- Hero headline and one-line summary
- Four summary statistics (illustrative sample content)
- Founder section with a quote and role
- What We Stand For: three value cards
- Join Our Community call to action
- The Join Us navigation link opens this page

5. Functional Requirements & Feature Specification

Features are prioritised using standard enterprise definitions: P0 = Must Have, P1 = High Priority, P2 = Planned.

5.1 Requirements Summary

ID	Feature	Priority	Status in POC
FR-01	Product & Baker Discovery	P0	Built
FR-02	Shopping Cart & Item Customization	P0	Built
FR-03	Guest Checkout & Order Placement	P0	Partially built (cart summary only)
FR-04	Order Lifecycle & Status Tracking	P1	Data model only
FR-05	Operations Dashboard	P2	Not started

5.2 FR-01: Product & Baker Discovery (P0)

The storefront provides a home page, an Our Bakers directory, a searchable and filterable product catalogue, and product detail pages. The home page groups inventory into three curated collections: Our Star Partners, In Demand and Guilt Free Indulgence.

Baker Partner	Specialty	Location	Rating
Sandhya Mishra	Traditional Sourdough & Millet Breads	Indiranagar	4.9 ★
Priya Sharma	Custom Fondant Cakes & Cupcakes	Koramangala	4.8 ★
Meenakshi Iyer	South Indian Tea-time Snacks	Jayanagar	5.0 ★
Ananya Das	Vegan & Gluten-Free Pastries	Whitefield	4.7 ★

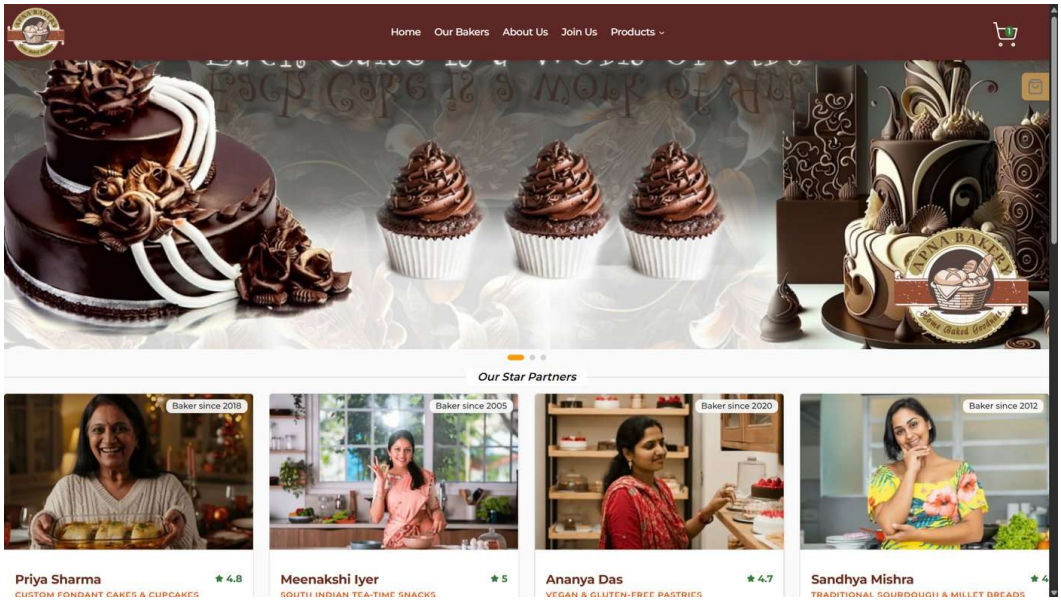

Figure 5. Home page: hero banner and Our Star Partners collection

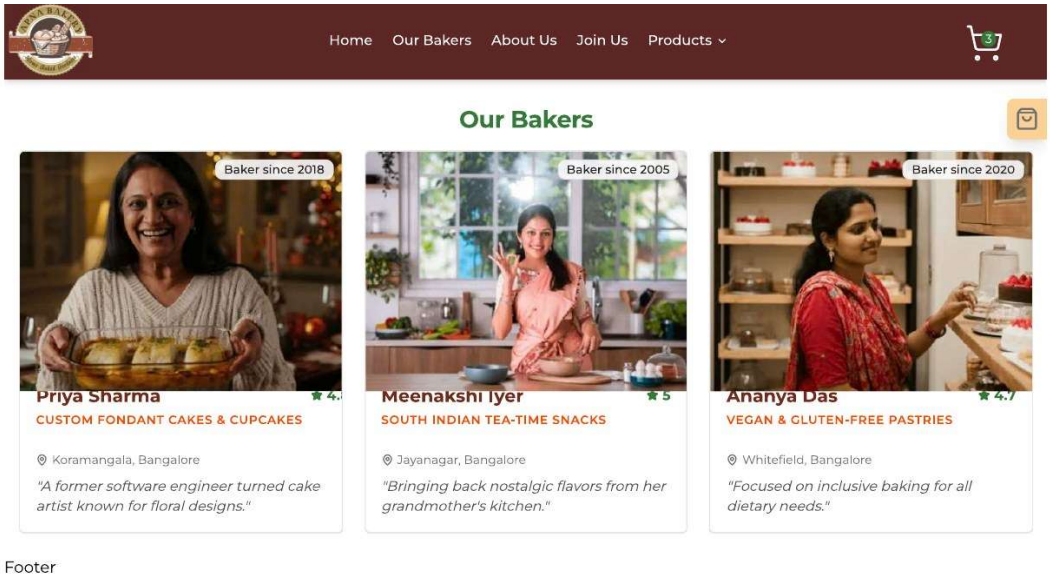

Figure 6. Our Bakers page: baker cards with specialty, location, rating and tagline

Search and filters. The Products page has a keyword search box, a collapsible filter sidebar, an item count and a Clear Filters button. Selected filters are written into the page URL (for example, ?category=cupcake,seasonal or ?search=fruit), so a filtered view can be reloaded or shared.

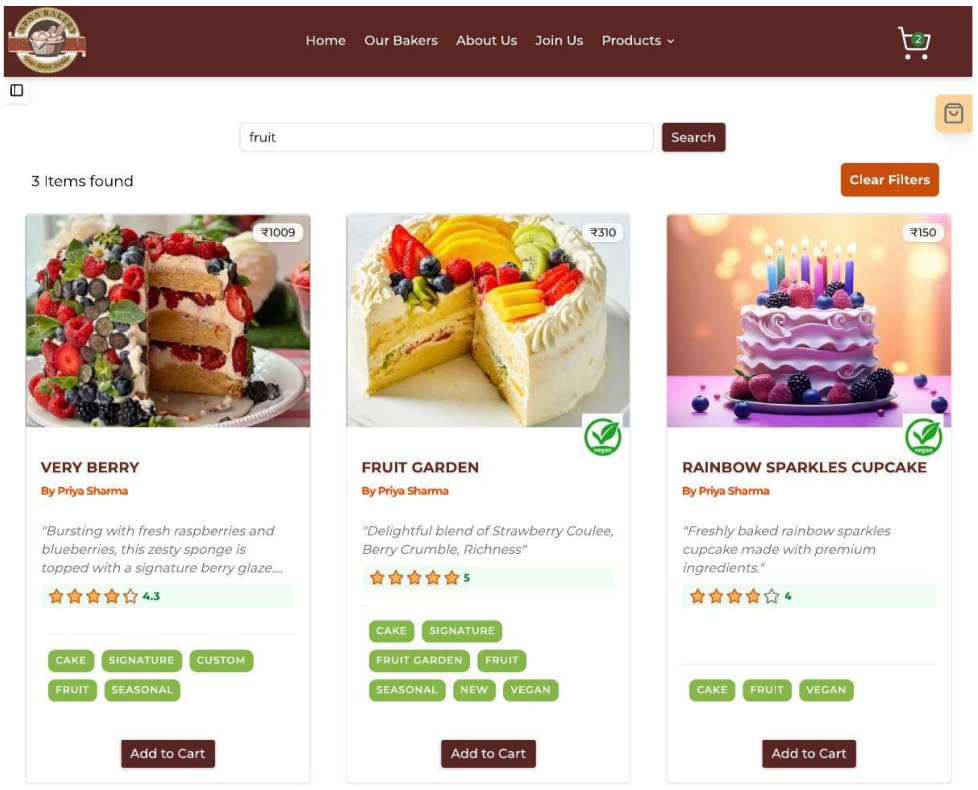

Figure 7. Products page: search results for “fruit”

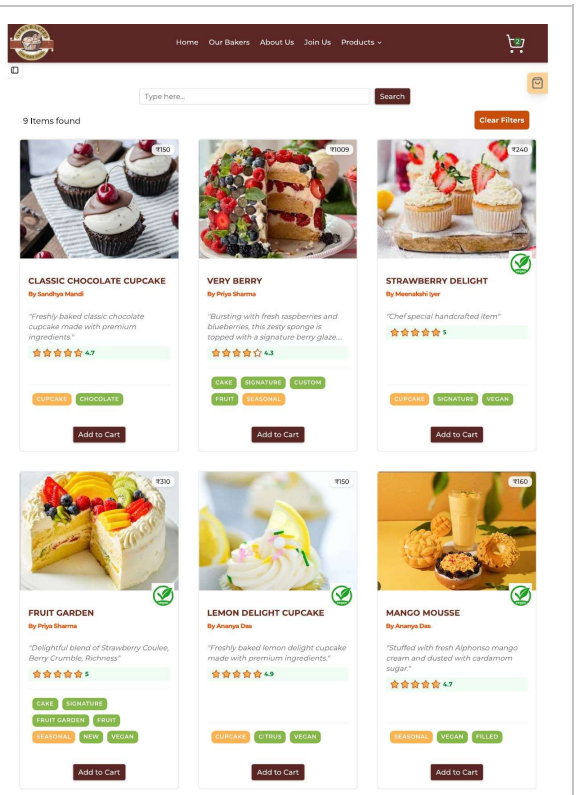

Figure 8. Products page with category filters applied

Key elements

- Search box and Search button
- Item count, for example “9 Items found”
- Clear Filters button
- Collapsible filter sidebar, toggled at the top left
- Product cards with price badge, name, baker, description, rating, category tags, vegan badge and Add to Cart
- Filters carried in the URL, for example ?category=cupcake,seasonal

Product detail. Each product has its own page with an image, baker, rating and review count, description, quantity and size selectors, message and special-instruction fields, price, Add to Cart and a stock note. Clicking the product image opens an enlarged view in a modal window.

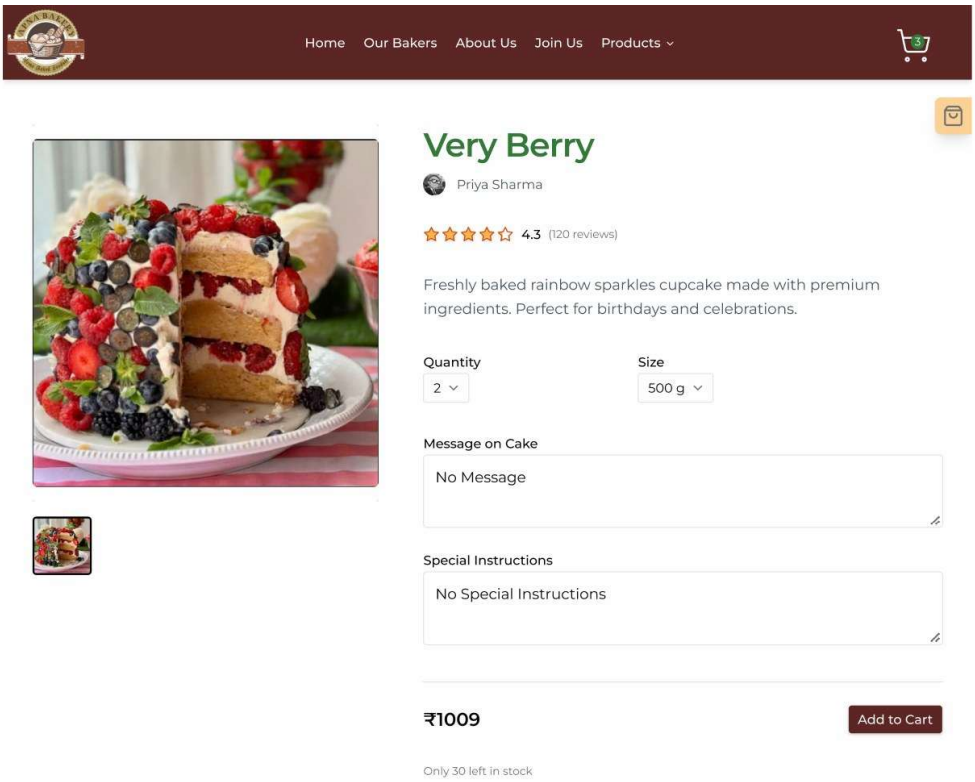

Figure 9. Product detail page

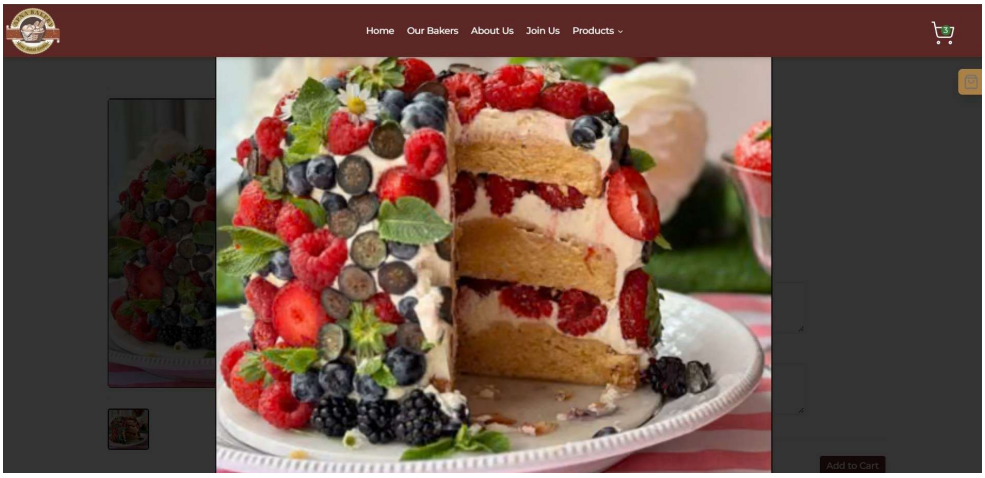

Figure 10. Enlarged product image in a modal window

User stories and acceptance criteria

ID	User Story	Acceptance Criteria
US-01	As a customer, I want to browse the partner bakers and their specialties so that I can discover products I like.	The home page and Our Bakers page show each baker's name, specialty, location, rating, baker-since year and tagline.

ID	User Story	Acceptance Criteria
US-02	As a customer, I want to search and filter products so that I can find what I need quickly.	Searching shows the number of items found. Selected category filters are reflected in the URL. Clear Filters resets the view. When nothing matches, a message suggests trying other filters.
US-03	As a customer, I want to see a product's details so that I can decide whether to buy it.	The product page shows the image, baker, rating and review count, description, price and a stock note. Vegan products carry a badge on the listing and tags show categories such as Vegan and Eggless. Clicking the product image opens an enlarged view in a modal window.

5.3 FR-02: Shopping Cart & Item Customization (P0)

Customers choose a quantity and size and can add a message and special instructions before adding an item to the cart. The cart is available as a quick-view drawer from any page and as a full cart page.

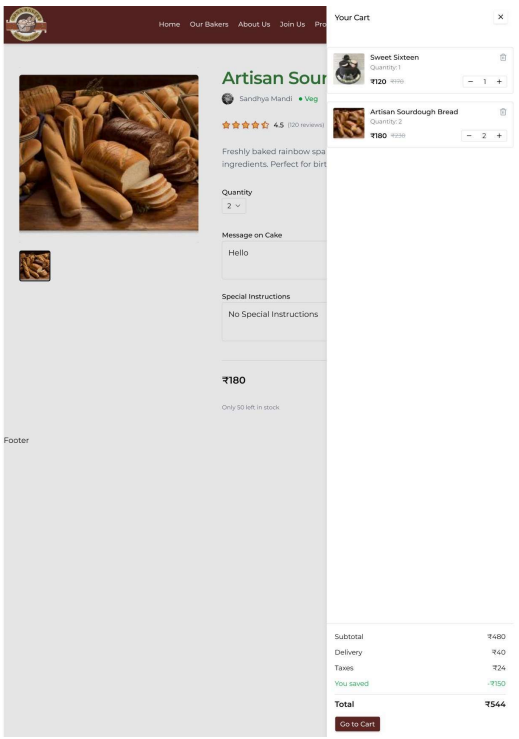

Figure 11. Cart quick view on a product page

Key elements

- Cart icon with item count, and a floating cart button
- Slide-over "Your Cart" panel over the current page
- Each line: thumbnail, name, quantity, price with a struck-through original price (illustrative), quantity controls and delete
- Summary: subtotal, delivery, taxes, You saved and total
- Go to Cart button
- Totals differ from the cart page (Section 10)

User stories and acceptance criteria

ID	User Story	Acceptance Criteria
US-04	As a customer, I want to add a message and special instructions to an item so that my order is personalised.	The product page offers Message on Cake and Special Instructions fields. The cart shows both for each item, with an edit control, and falls back to "No Message given" and "No special requests" when empty.

ID	User Story	Acceptance Criteria
US-05	As a customer, I want to manage the items in my cart so that I order exactly what I need.	Quantity can be increased or decreased, an item can be removed, and the price summary updates. Each cart line shows the unit price, line total and a variant badge.
US-06	As a budget-conscious customer, I want to see how much I save so that I can judge the value of my order.	The quick view shows original prices struck through, with subtotal, delivery, taxes, a “You saved” amount and the total. The original price is a placeholder generated in the cart (item price plus ₹50), not catalogue data.

5.4 FR-03: Guest Checkout & Order Placement (P0, Partially Built)

The POC implements the cart summary stage of FR-03. The Checkout Detail panel on the cart page shows the item total, the delivery fee, a free-delivery progress message, the total (tax included) and a Proceed to Pay button that has no action, together with a standard morning delivery notice. Checkout, payment and confirmation are not part of the POC.

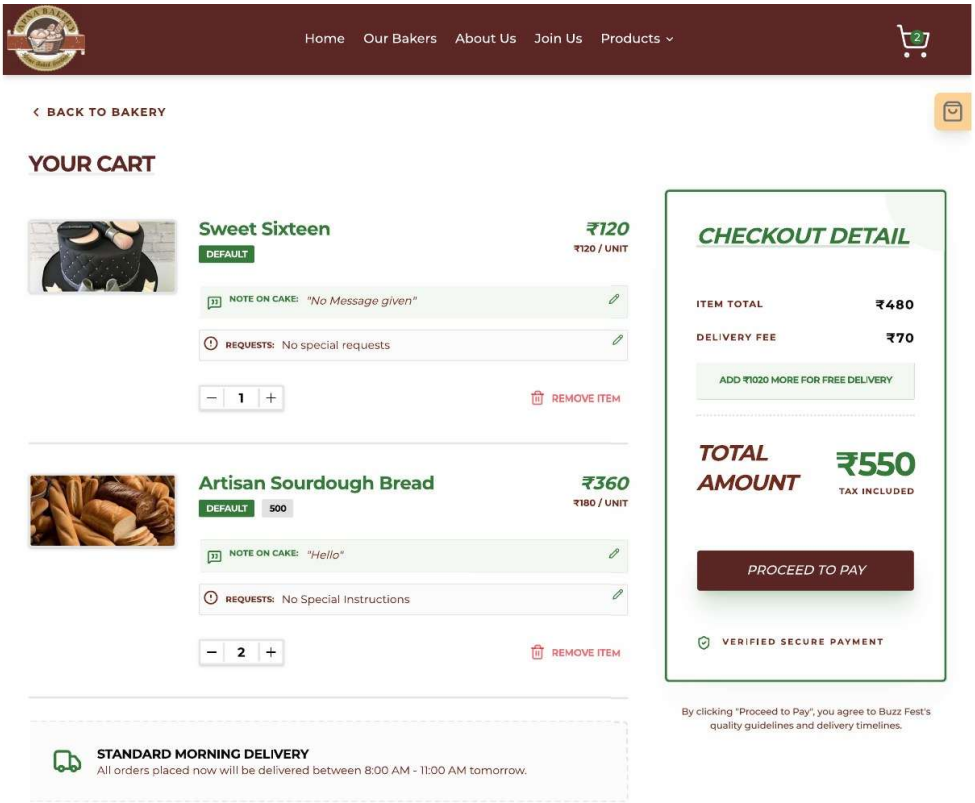

Figure 12. Cart page with Checkout Detail panel. This is the last screen of the POC journey; Proceed to Pay has no action.

User stories and acceptance criteria (built)

ID	User Story	Acceptance Criteria
US-07	As a customer, I want to know the delivery cost so that I can see my total before ordering.	The cart shows the delivery fee and the total. A message shows how much more to add to qualify for free delivery.
US-08	As a customer, I want to know when my order will arrive so that I can plan ahead.	The cart displays the standard morning delivery window of 8:00 AM to 11:00 AM the next day.

Specified, not yet built

Capability	Intended Behaviour	Status
Guest details	Email is required and name is optional; no account creation is needed.	Planned
Fulfilment choice	Store pickup (free) or home delivery with an address.	Planned
Payment	Online payment through a gateway such as Stripe or Razorpay.	Planned
Order confirmation	A confirmation screen and email after the order is placed.	Planned
Order record	Orders are stored with the price at purchase (see Section 5.5).	Data layer implemented, not connected to a checkout flow

5.5 FR-04: Order Lifecycle & Status Tracking (P1, Data Model Only)

The data layer includes an order creation routine. When invoked, it creates the order with status PENDING and a six-digit order number, records each line item with its price at purchase, quantity, variant, message, special instructions and baker, and creates one fulfilment task per baker, in a single transaction. No customer-facing tracking screen exists, and nothing in the POC moves an order beyond PENDING.

Status	Meaning
PENDING	Initial state when an order is created.
PAID	Payment confirmed.
PREPARING	Baker is preparing the order.
OUT FOR DELIVERY	Order dispatched to the customer.
COMPLETED	Order fulfilled.
CANCELLED	Order cancelled.

5.6 FR-05: Operations Dashboard (P2, Not Started)

A planned administrative workspace backed by the Task model. It will let operators and bakers manage fulfilment tasks, assign priorities, set due dates, record operational notes and flag

delivery exceptions. The data layer already creates a queued task for each baker when an order is created. No dashboard has been started.

5.7 Notifications (Planned)

No notifications are sent in the POC, and no email service is integrated. An order confirmation email is specified in the product requirements. Its trigger, provider and message template are to be defined.

6. Business Rules & Catalogue Overview

6.1 Business Rules

Rule	Detail
Delivery fee	On the cart page, a flat ₹70 applies when the item total is ₹1,500 or less.
Free delivery	Delivery is free when the item total is above ₹1,500. The cart shows how much more to add.
Delivery window	The cart displays standard morning delivery, 8:00 AM to 11:00 AM the next day.
Price display	The cart quick view strikes through an original price and shows total savings. The original price is generated in the cart (item price plus ₹50) and is not catalogue data, so the savings are illustrative. The cart page total is labelled tax included.
Quick view calculation	The cart quick view uses its own rule: delivery ₹40 (free above ₹500) plus 5% tax. This differs from the cart page and is to be reconciled.
Stock	Stock is shown on the home page cards (“Stock: N”) and on product pages (“Only N left in stock”). It is not enforced at add-to-cart or order creation (beta limitation, deferred to v1.1).
Search and filters	Search matches product name, description, baker and category. When a search term is present it takes precedence over other filters. Multiple selected categories match products in any of them, except that when Vegan is selected a product must match all selected categories. Baker and price-range filters are supported through the URL.
Catalogue freshness	Catalogue query results are cached for up to 60 seconds.
Order creation (data layer)	Orders are created as PENDING with a six-digit order number and a price snapshot per line item. One task per baker is created with medium priority and a 24-hour due date.
Checkout rules (planned)	Customer email required, name optional, and pickup free. These are specified but not yet built.

6.2 Catalogue Overview

- **Bakers:** Four partner bakers (Section 5.2), each with a specialty, location, rating and tagline.
- **Products:** Cakes, cupcakes, breads, pastries, doughnuts and snacks. Observed categories include Cake, Cupcake, Signature, Fruit, Seasonal, Chocolate, Vegan, Eggless, Citrus, Coffee, Filled, New Launch and Best Seller.
- **Catalogue size:** The unfiltered Products page lists 28 items.

- **Pricing:** Observed prices range from ₹110 to ₹1,009.
- **Variants:** A size selector on the product page and a variant badge on cart lines (for example, DEFAULT and 500).
- **Dietary information:** A vegan badge on product cards, a Veg indicator on the product page, and category tags such as Vegan and Eggless.
- **Images:** Product images are served from Cloudinary.

7. Technical Architecture & Data Model

buzzFest is built on a modern web stack, deployed on Vercel with a PostgreSQL database hosted on Neon.

Layer	Technology
Frontend framework	Next.js (App Router) with TypeScript
Styling	Tailwind CSS
ORM	Prisma
Database	PostgreSQL (Neon cloud)
Hosting & CDN	Vercel
Image hosting	Cloudinary

7.1 Data Model Overview

The data model has six entities. Bakers offer products, products can have size variants, customer orders contain line items that capture a price snapshot, and each order generates fulfilment tasks assigned to bakers. There is no user account entity, which matches the guest-checkout approach.

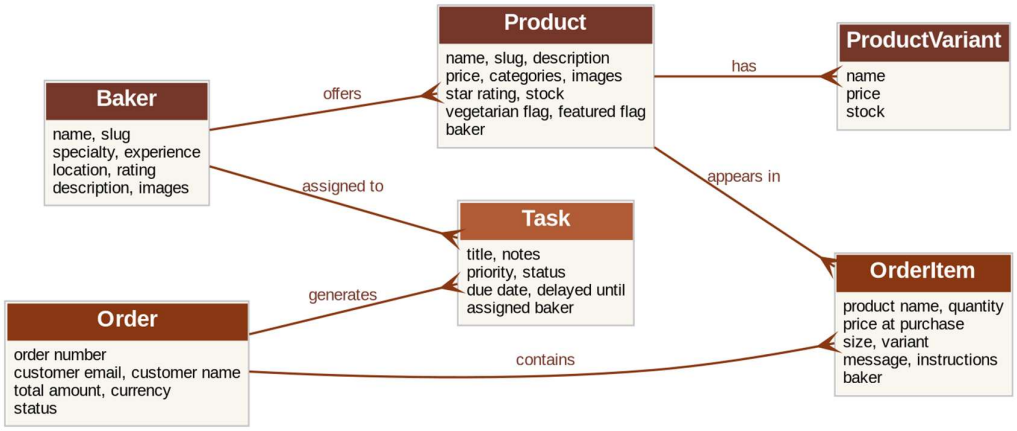

Figure 13. Data model overview

7.2 Entities

Entity	Purpose	Key Information
Baker	Partner baker profile and attribution.	Name, URL slug, specialty, experience, location, description, images and rating.
Product	Catalogue item sold by one baker.	Name, slug, description, price, categories, images, star rating, stock, and vegetarian and featured flags.
ProductVariant	Size or pack option for a product.	Name, price and stock for each variant.
Order	A customer order.	Unique order number, customer email, optional customer name, total amount, currency (default INR) and status (default PENDING).
OrderItem	A line item in an order, with a price snapshot.	Product name and image, quantity, price at purchase, size, variant, message, special instructions and baker.
Task	Fulfilment task for a baker, linked to an order.	Title, notes, priority, status, due date and delayed-until date, plus the assigned baker.

7.3 Enumerations

Enumeration	Values
OrderStatus	PENDING, PAID, PREPARING, OUT_FOR_DELIVERY, COMPLETED, CANCELLED
TaskStatus	QUEUED, IN_PROGRESS, COMPLETED
Priority	LOW, MEDIUM, HIGH, URGENT

7.4 Data Gaps for Planned Features

The current schema does not yet hold the data that several planned features need.

Planned Feature	Data Needed	Current State
Delivery and pickup (FR-03)	Fulfilment method, delivery address and contact number.	Not stored. An order holds only the customer's email, name and total.
Original price and discounts	An original price (MRP) on products and in the order snapshot.	Not stored. The cart quick view generates an original price (item price plus ₹50), so its savings are illustrative.
Delivery fee and tax	Delivery fee and tax saved with the order.	Not stored. Only the total amount is saved, and the quick view and cart page calculate fees differently.
Payment	Payment method, reference and paid time.	Not stored. The PAID status exists but nothing sets it.
Order tracking (FR-04)	The time of each status change.	Not stored. Only the current status and last-updated time are kept.
Stock enforcement	Reserving or reducing stock at purchase.	Stock fields exist on products and variants, but nothing reserves or reduces them.

Planned Feature	Data Needed	Current State
Repeat ordering	A way to recognise returning customers.	No account entity. Customer email is stored on each order.

7.5 Data Access & Rendering

Catalogue pages are rendered on the server. Filters and search terms arrive as URL query parameters, are normalised on the server and passed to the database query, and results are cached for up to 60 seconds. The cart is held on the client.

8. Non-Functional Requirements

These are targets for general availability.

Category	Requirement
Performance	P95 API response latency < 250 ms. Next.js frontend on Vercel targets First Contentful Paint < 1.2 s and Time to Interactive < 2.0 s, using Server-Side Rendering and edge caching via the Vercel CDN.
Security	Secure guest session tokenisation, end-to-end HTTPS, rigorous input sanitisation, SQL injection prevention via Prisma ORM, environment variables (database URLs, API keys) managed through Vercel secrets, and strict CORS policies.
Accessibility	Strict WCAG 2.1 AA compliance, robust keyboard navigation, explicit focus states using corporate highlight tokens (#7FB56D / #FDB343), and proper ARIA labelling on modal components.
Data Integrity	ACID-compliant PostgreSQL with indexed foreign keys; immutable price and line-item snapshots on orders.

8.1 Measured Baseline (Lighthouse, Mobile)

A Lighthouse performance run was taken on 18 October 2026 against the Products page (/products?category=cupcake) with mobile emulation, a 4x CPU slowdown and simulated slow-4G throttling (about 1.6 Mbps, 150 ms round trip). The overall performance score was 53 out of 100.

Metric	PRD Target	Simulated Mobile	Observed in Browser	Status
First Contentful Paint	< 1.2 s	7.2 s	2.6 s	Not met
Largest Contentful Paint	Not set	7.2 s	2.7 s	—
Time to Interactive	< 2.0 s	8.9 s	Not measured	Not met
Speed Index	Not set	7.2 s	2.7 s	—
Total Blocking Time	Not set	290 ms	—	—
Cumulative Layout Shift	Not set	0	0	No shifts

Metric	PRD Target	Simulated Mobile	Observed in Browser	Status
Document response time	API P95 < 250 ms	40 ms	—	Not comparable

Simulated values are Lighthouse's throttled estimates for a mid-range phone on a slow connection. Observed values were measured in the browser during the same page load, before throttling is simulated. The accessibility category was not part of this run, so there is no WCAG baseline yet.

What the run suggests

- The largest element is the first product card image, which is lazy-loaded and not prioritised. Lighthouse estimates about 2.5 s passes before that image starts loading.
- Product images are delivered up to 828 px wide but displayed at about 364 px, an estimated 160 KiB of avoidable download.
- The HTML document was delivered without compression (an estimated 126 KiB saving). To be confirmed on a clean run.
- The site's own script includes about 14 KiB of code for features that modern browsers already support.
- Page weight was 1.2 MB across 49 requests, including about 361 KB of product images served from Cloudinary.

Already healthy

Layout is stable (CLS 0), the document responds in 40 ms, the page has 664 elements, and every image has explicit dimensions. Total blocking time was 290 ms.

Caveat

The test browser injected a third-party antivirus script into the page (173 KB, render-blocking, with an estimated 1.5 s impact on First Contentful Paint) and held a long-polling connection open, which stopped the page from settling and triggered Lighthouse's "page loaded too slowly" warning. The simulated figures are therefore pessimistic. This baseline is indicative only. It is to be repeated in a clean incognito window with extensions and web protection turned off, with the Accessibility category included so that a WCAG baseline can be recorded.

9. UX/UI Design System

The platform follows the Apna Bakery design system, a chocolate-inspired palette applied across UI components, buttons and typography, set in the Inter typeface.

Color Name	Hex Code	Swatch	Usage in UI
Dark Brown	#75372A		Primary buttons, headers, navigation brand background
Mid Brown	#893813		Secondary buttons, hover states, active borders
Light Brown	#B15C36		Accent highlights, subtitle text, promotional tags
Light Green	#7FB56D		Success badges, stock availability indicators, focus highlight

Color Name	Hex Code	Swatch	Usage in UI
Light Orange	#FDB343		Rating stars, discount callouts, warning flags, focus highlight
Disabled Grey	#C4C4C4		Disabled button state

Figure 14. Apna Bakery brand mark

- **Button states:** Primary Unselected, Primary Selected and Disabled (Grey #C4C4C4).
- **Layout:** Mobile-first responsive framing, with a maximum width of 400 px on desktop.

9.1 Mobile Views

On a phone-width screen the layout becomes a single column. Baker and product cards stack vertically, the search box and Clear Filters button sit above the product list, and the cart opens from a floating button.

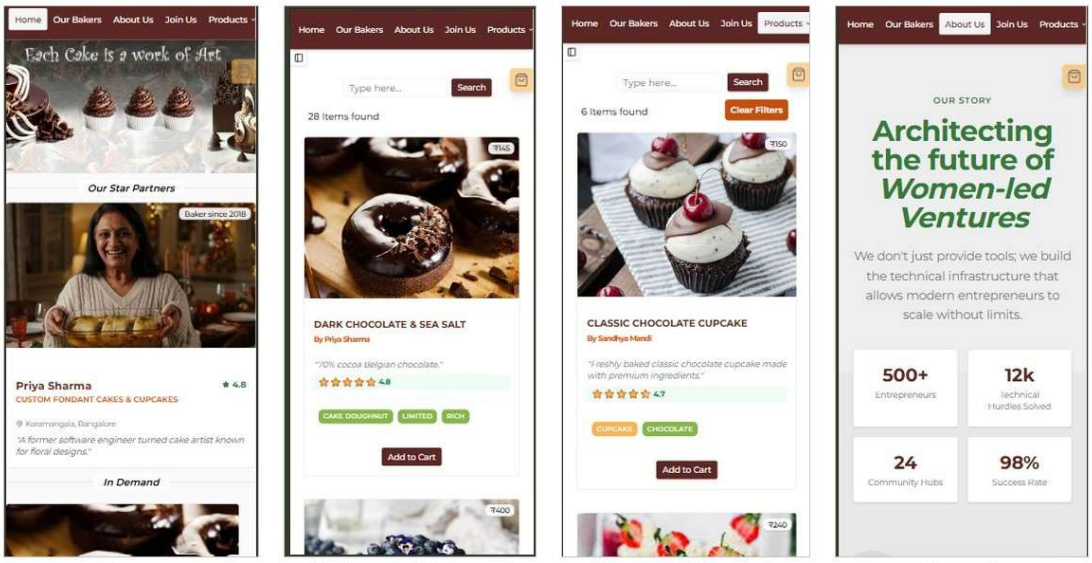

Figure 15. Mobile views: Home, Products (28 items), Products (filtered, 6 items) and About Us

- **Navigation:** The header links stay in a single row with no collapsed menu, and the Products item is clipped at the narrowest width captured.
- **Hero banner:** The home hero banner is shown as a short strip, which crops the artwork.

10. Known Beta Limitations & Risk Mitigation

Limitation	Status / Mitigation
Journey ends at the cart	By design in the POC. Proceed to Pay has no action. Checkout, payment and confirmation are planned (Section 13).
Inconsistent totals	The quick view and cart page use separate calculations. For the same cart, the quick view shows delivery ₹40 (free above ₹500) plus 5% tax (total ₹544), while the cart page shows delivery ₹70 (free above ₹1,500) with tax included (total ₹550). To be reconciled before checkout is built.
Illustrative discounts	The struck-through original price and “You saved” amount are generated in the cart (item price plus ₹50). The catalogue has no original-price field.
Stock not enforced	Stock levels are displayed but not enforced at purchase. Deferred to v1.1.
“Join Us” onboarding link	Static placeholder that opens About Us. Baker onboarding is not available.
Sample content	About Us statistics, product descriptions and some copy are placeholders. For example, several products reuse the same description, and the Message on Cake field appears on non-cake items.
Baker attribution	The baker name is shown as “Sandhya Mishra” on baker cards and “Sandhya Mandi” on product pages. Being patched under Engineering Director oversight.
Our Bakers layout	In the captured view, each baker’s name and rating are partly covered by the photo, and only three of the four baker cards were visible.
Mobile layout	The header links stay in one row on small screens with no collapsed menu, and the Products item is clipped at the narrowest width captured. The home hero banner is cropped to a short strip.
Performance targets	In an indicative Lighthouse run, First Contentful Paint and Time to Interactive were well above the Section 8 targets. The run was affected by an injected antivirus script and is to be repeated (Section 8.1).
Page metadata	Every page title reads “Create Next App” and the footer is placeholder text.
Listing exclusion	Products whose name contains “signature” are excluded from the Products grid. The item count still includes them.

11. Assumptions, Dependencies & Open Questions

11.1 Assumptions

- buzzFest is a conceptual showcase with no physical store. All products, bakers and any orders are sample data.
- The deployment runs on the Vercel and Neon free tiers.

11.2 Dependencies

- Next.js, Prisma, Neon (PostgreSQL), Vercel and Cloudinary.
- A payment gateway (Stripe or Razorpay) and an email provider are required before checkout and notifications can ship.

11.3 Open Questions

- Does the cart persist across a page reload, and is there a maximum quantity per item?
- How and where are taxes calculated, given the difference between the quick view and the cart page?
- Which delivery areas will be supported, and will there be a minimum order amount?
- What is the full list of dietary tags?
- What do the empty-cart and out-of-stock states look like? Only the no-results message is documented.

12. Launch, Rollout & Phased Canary Strategy

The rollout plan applies once checkout is complete and follows a gated progression managed by the QA Lead.

Phase	Scope
Phase 1: Alpha / Staging	Internal testing on Vercel preview environments, verifying Prisma schema migrations, with QA Lead Marcus Brody.
Phase 2: Canary	10% gradual traffic rollout to selected Bengaluru beta cohorts (for example Koramangala and Indiranagar) for 7 days.
Phase 3: General Availability	Full public launch across Bengaluru with analytics and error tracking.

13. Roadmap & Future Scope

The items below are planned and carry no committed delivery date.

Item	Description
Checkout & guest details	Email required, name optional, no account needed (FR-03).
Fulfilment options	Store pickup (free) and home delivery with address capture.
Payment gateway	Integration with Stripe or Razorpay.
Order confirmation & email	Confirmation screen and email after order placement.
Cart totals reconciliation	A single, consistent calculation of delivery and taxes across the quick view and cart page.
Real discount pricing	Store an original price (MRP) in the catalogue and the order snapshot so that discounts are real.
Performance tuning	Prioritise the first product image (no lazy-loading, high fetch priority), serve responsive image sizes, enable HTML compression and re-measure against the Section 8 targets.

Item	Description
Mobile navigation	Collapse the header links into a menu on narrow screens and fix the cropped hero banner.
Stock reservation (v1.1)	Real-time inventory enforcement at checkout to prevent overselling.
Order status tracking	Customer-facing order status (FR-04).
Baker onboarding	Replace the “Join Us” placeholder with a working onboarding flow.
Offers & coupons	Coupons and offers, with top offers listed first (from research).
Dietary filters	Sugar-free product filter (from research).
Assisted ordering	Order-by-phone and call-the-bakery option, plus language options (from research).
Faster repeat ordering	Quick re-order from past orders and combo options for party and bulk orders (from research).
Real-time delivery updates	Live updates on the delivery person (from research).
Operations Dashboard	Task-based fulfilment workspace (FR-05); not yet started.

14. Glossary

Term	Definition
ACID	Atomicity, Consistency, Isolation, Durability: database transaction guarantees.
AOV	Average Order Value.
CDN	Content Delivery Network.
FCP / TTI	First Contentful Paint / Time to Interactive.
GA	General Availability.
MRP	Maximum Retail Price: the original price shown against a discounted price (planned).
ORM	Object-Relational Mapping (Prisma).
POC	Proof of Concept.
SSR	Server-Side Rendering.
WCAG	Web Content Accessibility Guidelines.

15. References & Design Assets

Category	Resource	Description
Research	Apna Bakery Case Study	Case study covering research, personas, journey map, wireframes, prototypes and takeaways.
Research	User Personas	Persona research slides.

Category	Resource	Description
Design	Digital Wireframes (Figma)	Wireframes in the APNA BAKERY HOME SCREEN file.
Design	Low-Fidelity Prototype (Figma)	Search-flow prototype.
Design	High-Fidelity Prototype (Figma)	Polished screens and flows.
Design	Style Guide (Figma)	APNAbAKERY team library: brand and component styles.
Product	Live Site	Deployed beta on Vercel.
Product	Source Repository (GitHub)	buzzFest project code.
